

Experience - Competence - Reliability

Saskatchewan Indian Institute of Technology (SIIT)
Four Winds Protective Services Training Centre

Whitecap First Nation, SK

Programming
Preliminary Design

For many years, all levels of government have recognised the need to provide specialized Protective and emergency services training, with an emphasis on training for First Nations. Our firm has worked with SIIT from the beginning to gather together a diverse group of project partners to fill the need and provide support to communities across the province.

The total program includes an integration of classrooms, indoor field training, multiple scenario burn and field response installations, Firing range and fire arm training, driving track and training, as well as an onsite residence for students.

Rajani Blaser Mannix Architecture has worked closely with all the project partners to produce a comprehensive program and preliminary design that will respond to the training needs of protective services well into the future.
